Palo Alto, California 94304

Dear Professor Lederberg:

In looking over the schedule of articles for Accounts, I noted your intention to submit a manuscript, "Computer Emulation of Scientific Inference: Elementary Organic Chemistry," a year ago. We still have not given up hope of having your paper. Would it be possible for you to send me a revised target date for the completion of your manuscript?

JUL 2 1969

After some abortive efforts that failed just short of a delivery, I decided that our work was no longer quite ripe for ACR, having just turned into new, rapidly moving phases (cf. JACS May 21); what I ~~xxxxx~~ have written for ACR has gotten so out of hand that I thought it better for a book which I am polishing up this summer for Freeman.

May I take the initiative about a year from now to consult you again about writing in ACR when the present wave has run its course? This would emphasize the computer-intelligence applications, rather than the background graph theory that you can see in the enclosed reprint (which has been in press for a couple of years.)

Sincerely,
